PREVEXTO

SUPERHEROES WEAR COLLARS NOT CAPES

UP 8 TO MONTHS OF PROTECTION

Introducing **Prevexto™**: The long-lasting and cost-effective collar which protects your pet from fleas and ticks for up to 8 months.

*8 months for ticks, 7-8 months for adult fleas.

Shaping the future of animal health

Virbac

WHY DO I NEED TO PROTECT MY PET *FROM FLEAS & TICKS?*

Parasite risk in the UK is no longer just a seasonal concern; it has become a year-round threat to our pets. Due to milder winters, ticks remain active for much longer periods. Furthermore, with a rise in pets traveling to and from abroad, the risk from vector-borne diseases has increased.

To keep your pet safe, it is vital to switch to year-round, personalised protection tailored to their specific lifestyle and location. Prevexto™ is the ideal choice for pet owners seeking a cost-effective, long-term solution that eliminates the stress of remembering monthly treatments.

FLEAS

Beyond just making your pet itchy, fleas can carry serious pathogens that transmit diseases like tapeworms and bacterial infections to your pet—and sometimes even to you.

TICKS

Ticks are more than just a nuisance; they can carry dangerous pathogens that transmit serious, life-threatening conditions like Lyme disease and Babesiosis to you and your pet with a single bite.

WHAT IS PREVEXTO™?

Prevexto™ is a parasiticide collar for cats and dogs, designed for pet owners who want long-term, reliable protection for fleas and ticks. It's easy to use and cost-effective. Prevexto™ is manufactured by Virbac, a leading global player in pet health since 1968.

Suitable for cats over 10 weeks of age and dogs over 7 weeks of age.

WHY CHOOSE PREVEXTO™?

AFFORDABILITY & LONG-TERM CONVENIENCE

Affordable protection from a single collar that kills fleas and ticks for up to 8 months.

CLINICALLY PROVEN

Designed by vets for your pet. Kills fleas and both repels and kills ticks.

VECTOR-BORNE DISEASE (VBD) RISK REDUCTION

Reduces the transmission risk of canine tick borne diseases such as Babesiosis and Ehrlichiosis.

IDEAL FOR MULTI-PET HOUSEHOLDS

Suitable for both cats and dogs.

CONTINUOUS DIFFUSION

The collar creates an invisible layer of uninterrupted protection on the skin of your pet, due to the slow release of the molecules from the collars polymer matrix technology.

HEAD TO TAIL PROTECTION

The active ingredients flumethrin and imidacloprid are distributed through the lipid layer on your pet's skin and coat, ensuring consistent body coverage without systemic absorption (entering the bloodstream).

COMFORT & NO MESS

Non-greasy, soft and fits all breeds and sizes.

SAFETY

Controlled expansion mechanism widens the collar if your pet gets trapped. The 'V' breakaway point on the collar for cats & small dogs, also helps to prevent choking and therefore acts as a double safety mechanism.

WATER RESISTANT

Prevexto™ remains effective if the pet becomes wet. However, for maximum duration of activity, pet owners are advised to remove the collar before bathing or swimming.

PAIR YOUR PROTECTION

Prevexto™ is the ideal flea and tick solution to pair with a broad spectrum wormer. Please ask your vet for further advice.

PERSONALISED TREATMENT & PROFESSIONAL ADVICE

With parasite protection no longer being one-size-fits-all, flea and tick protection should be personalised based on your pet's species, breed, size, lifestyle and geographical location. Parasite risks change depending on where you live or travel and your pet's lifestyle will define what sort of parasite protection your pet will require. Urban parks, rural woodlands, coastal areas, and livestock fields all host different levels of flea and tick activity.
For comprehensive advice, always talk to your vet first.
