Shining the spotlight on
PET DENTAL HEALTH

Canine | Feline

YOUR PET'S CURRENT STAGE

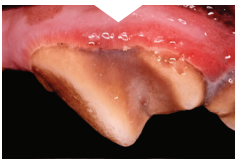

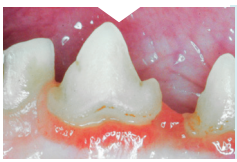

STAGE 0

EXCELLENT HEALTH: The gum margin is flat and pink and creates a scalloped edge against the teeth.

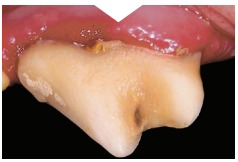

STAGE 1

GOOD HEALTH: The gum (or gingiva) at the top of the teeth is inflamed and swollen, and plaque covers the teeth.

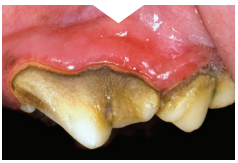

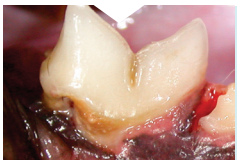

STAGE 2

FAIR HEALTH: The tooth starts losing support from bone loss. Bad breath is usually noticeable.

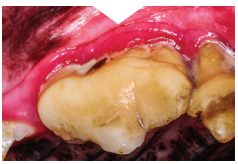

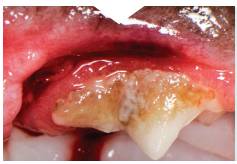

STAGE 3

POOR HEALTH: Tooth support worsens through further bone loss. The pet's mouth is painful, and bad breath is noticeable.

STAGE 4

VERY POOR HEALTH: Tooth support loss has advanced, tooth extraction is required.

Shaping the future of animal health

Virbac

Healthy teeth means happy pets!

HELPFUL TIPS:

- Introduce brushing to your pet from an early age. Specially designed **dual-ended toothbrushes** are shaped to fit your pet's mouth.

- **Enzymatic toothpaste** helps remove plaque & tartar - Virbac's specially formulated toothpastes come in fish and poultry flavour, and are well accepted by pets, making brushing easier.

- Adding **Aquadent FR3SH™** to your pet's water or applying **Hexarinse** directly to the gums can limit plaque build-up & help maintain fresh breath.

- **A dry food diet** can help reduce plaque build-up.

- A daily **VeggieDent FR3SH Dental Chew** for dogs cleanses, cools and addresses digestive causes of bad breath.
